

Your Guide to Intel Innovation Content

You'll hear from the experts and industry leaders who deliver new, forward-looking solutions with speed and real-world scale.

Check out how to best navigate the Intel Innovation Content. Choose your Track, Topic and Session Level.

Artificial Intelligence

Learn how to benefit from an optimized "ingest to inference" pipeline from workstation to cloud to edge, including 10-to-100x performance gains through optimizations for popular frameworks/libraries, Intel's own game-changing tools, and much more.

Cloud

See how Intel alongside partners deliver technology, tools, and solutions to get the best cloud app performance, like IPUs to handle infrastructure processing, simpler access to ML-based telemetry and automatic tuning across clouds.

Client

Learn more about how Intel and other top tech companies are getting developers optimal performance for cloud-native applications across the entire cloud-to-device continuum—from bridging Windows and Linux for AI development to new tools for building Progressive Web Apps.

Edge & 5G

Discover Intel's suite of open source-based, cloud-native and edge-native tools supporting virtualization, real-time computing, and inference in the network and at the edge.

Innovation for the Future

See how our researchers and academic partners advance promising technologies in areas like Quantum Computing to achieve orders-of-magnitude performance improvements that will shape the next decade of computing.

Demos

Discover new solutions in this demonstration of breakthrough developments in AI, 5G, Edge, Cloud, Client Solutions and more, from Intel and the global ecosystem.

Developer Stories

Hear from Intel's developer community and how they are using Intel technologies and software developer tools to impact lives around the world.

Technical Insights

Deeply technical and forward thinking, these sessions focus on how Intel & partners are creating technology and solutions that help address the challenges that developers are facing today.

Sessions

These sessions provide attendees with knowledge of a specific focus area and are offered at various levels of learning. Focusing on the 4 pillars – AI, Client, Edge & 5G, Cloud.

Session Levels

100 Level

Introductory technical session, no prior knowledge of the technology or solution needed.

200 Level

Technical sessions focused on a specific technology or solution. Prior knowledge of technology is helpful.

300 Level

Technical deep dive sessions focused on code samples, tools & architectures. Advanced knowledge of technology or solution required.
