

Legal Leader Boosts System Performance with Hyperconverged Infrastructure

Bradley is a national law firm with a reputation for skilled legal work, exceptional client service, offering legal services in dozens of industries and practice areas. Bradley wanted to enable greater security capabilities, support future growth and manage IT costs. The firm wanted to replace its traditional storage area network SAN with an infrastructure that would offer the flexibility needed to support a Microsoft environment and enable future growth and development. Bradley chose DataON to provide a hyperconverged infrastructure (HCI). The Intel® Select Solution for Microsoft Azure Stack HCI enabled Bradley to deploy a pre-verified HCI environment quickly, while providing the interoperable building blocks to allow the Bradley IT team to adjust and make additions over time, in line with business need.

“We just weren’t used to the [backup] process completing that fast. We haven’t seen any performance degradation since then either. This is a great benefit of Intel® Optane™ technology for us.”

Ellen Kirby
manager of technical operations, Bradley
